

A Simple, Low-Risk Shift From Reactive to Proactive Fall Prevention

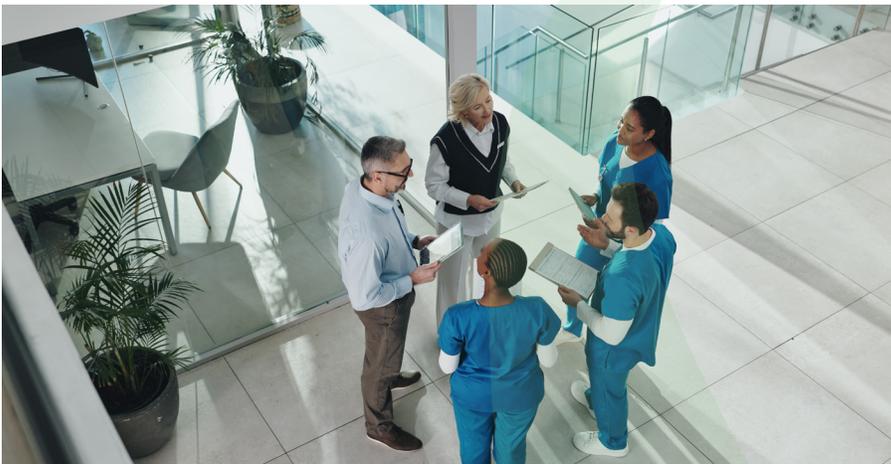

Falls strain safety, staffing, and financial performance. Most organizations act after the incident. FallSight helps teams intervene before it occurs.

Daily fall-risk predictions with clear, nurse-ready insights. No hardware. No wearables. No extra workload.

Imagine If Your Team Could...

- » See each morning who is most at risk of falling
- » Intervene earlier with confidence
- » Eliminate 30–40 minutes of manual scoring per resident
- » Create a safer, calmer environment for residents and staff

The FallSight Pilot gives your community a 90-day window to experience this impact with minimal commitment.

Why Leaders Choose the FallSight Pilot

- » Immediate reduction in manual tasks
- » Earlier visibility into resident risk
- » Noticeably safer communities
- » Stronger staff confidence and consistency
- » No hardware, sensors, or installation
- » Clear, measurable results within 90 days

Pilot Pricing

Implementation (one-time): \$4,500
Pilot Subscription: \$1,500/month (3 months)

- » No long-term obligation
- » No equipment costs
- » Minimal lift for clinical teams
- » Ideal for CCRCs wanting quick wins and validated outcomes before scaling.

Pilot Includes*

- » 24/7 Help Desk Support
- » Full FallSight platform access
- » Daily automated predictions
- » “Who and why” explanations for clinical teams
- » PointClickCare integration
- » Quick onboarding by ThriveWell Tech
- » Weekly insights review
- » Final outcome & ROI summary

*PCC Data Relay must be active for data integration.

Questions We Hear Most Often

How does FallSight make its predictions?

FallSight analyzes all clinical data available in the EMR—vitals, medications, mobility patterns, nursing notes, and more—to generate a combined fall-risk score and clear explanations.

Does knowing a fall-risk score increase audit or compliance risk?

No. FallSight provides earlier visibility and clinical recommendations that support safer care. The insights can be used for discussion, review, and care planning—as part of standard good practice.

What if our EMR doesn't have all the data needed?

A data quality assessment is completed before onboarding to confirm your EMR is ready. If gaps exist, FallSight adjusts to use the data available.

Will this add work for nurses?

No. FallSight reduces work by eliminating manual fall-risk scoring and providing ready-to-use insights.

Is hardware required?

No sensors, wearables, or devices are needed.

How soon can we start?

Most communities go live in 2–3 weeks.

What happens after the pilot?

Move into a standard subscription or pause with no obligation. You keep your final outcomes report.

What Clinical Teams Say

Missy J. Clinical Leader

“FallSight is a genuinely helpful tool. Our IDT reviews the report weekly to identify high-risk residents, and it has helped us put the right interventions in place and prevent falls. The data and QAPI reports are now an essential resource for our team.”

Director of Nursing (Anonymous)

“One of the things I appreciate most about FallSight is the time it saves. It gives us the information we need without adding work.”

Stephanie A. Director of Nursing

“I love the time-saving piece. I get an email every morning showing who moved into high risk. FallSight flagged a resident with a sudden weight change, and we caught a CHF exacerbation early. We adjusted treatment right away and likely prevented a hospital return. Having this information at my fingertips has increased my productivity and strengthened our care.”
